An investigation of various types of turbochargers and of the operation of the engine with a variable-nozzle turbocharger leads to the following conclusions. In charging small engines the best results are obtained by using turbo chargers with a radial centripetal turbine because this unit has a high efficiency, the turbine wheels are cheap and easy to make (especially by using precision casting techniques), and because its speed (Machinery--Engines, TT, v. 6, no. 3) (over)
